

PROVATION® EHR FEATURES

- **Electronic Perioperative Documentation** allows nursing and anaesthesia staff to complete and sign all required point-of-care documentation electronically
- **Electronic Physician Documentation** allows physicians to document procedures quickly and completely. Produces complete, coding-ready and image-enhanced documentation, plus ancillary reports and instructions
- **Document Scanning and Management** allows users to scan documents directly to the patient chart, integrating seamlessly with other clinical documentation
- **Electronic Patient Consent** forms allow for capture and automated storage of patient signatures and consent forms within the patient chart
- **Pathology Import** features allow Day Surgery Centres to receive and store pathology results from supported vendors within the patient chart
- **Pathology Follow-Up** allows physicians to review and sign received pathology results electronically
- **Vitals Monitors Interface** automatically captures patient vitals directly from monitors and incorporates them into the electronic patient chart
- **Scheduling Interface** enables patient demographic and scheduling information to populate the system automatically
- **Robust Data Reporting Capabilities** support quality initiatives, benchmarking and other reporting statutes. Procedure data export allows for customised Quality Indicators data analysis

■ ProVation[®] EHR

Taking the Paper Out of Patient Charting

ProVation[®] EHR is the first true electronic health record designed for busy Day Surgery Centres. ProVation EHR offers robust electronic documentation and document imaging for all elements of the patient encounter, from past records to procedure documentation to follow-up care.

With ProVation EHR, Day Surgery Centres now have affordable access to a single, patient-centric documentation system that eliminates printing and chart storage costs and streamlines workflow.

PROVATION® EHR HELPS YOUR DAY SURGERY CENTRE BY:

- **Increasing** patient throughput and streamlining workflow
- **Eliminating** patient chart storage space and costs
- **Offering** rich, pre-built medical content created by our staff of 30+ physicians, nurses and coders
- **Interfacing** seamlessly with vitals monitors and information systems
- **Driving** QI and Benchmarking metrics through a robust set of turnkey data reports and intuitive data query options

Print entire patient chart with a single click

Robust suite of scanning features

Worklist identifies charts with unfiled documentation
