

**Patient Name:** Mabel Davis  
**MRN:** 12326432  
**Date of Birth:** 19/12/1963

**Procedure Date:** 02/01/2009  
**Admit Type:** Inpatient  
**Age:** 43

**Exam:** Bronchoscopy  
**Provider:** Dr. Henry Gulliver  
**Referring MD:** Dr. John Anderson  
**Indications:** Left Upper Lobe Nodule

**Medications:** Midazolam 2 mg IV, Atropine/Lidocaine 4%

**Procedure:**

After obtaining informed consent, the bronchoscope was introduced through the right nostril and advanced to the tracheobronchial tree. The bronchoscopy was accomplished without difficulty. The patient tolerated the procedure well.

**Findings:**

The nasopharynx/oropharynx appears normal. The larynx appears normal. The vocal cords are normal and move normally with phonation and breathing. The subglottic space is normal. The trachea is of normal caliber. The carina is sharp. The tracheobronchial tree of the right lung was examined to at least the first subsegmental level. Bronchial mucosa and anatomy in the right lung are normal; there are no endobronchial lesions, and no secretions.

**Left Lung Abnormalities:** A medium sized non-obstructing erythematous and flat lesion was found in the left mainstem bronchus. Brushings were obtained and sent for cell count, cytology, bacterial culture, viral smears & culture, and fungal and AFB analysis. An endobronchial biopsy was performed using a forceps and sent for routine cytology.

**Complications:**

No complications

**Impression:**

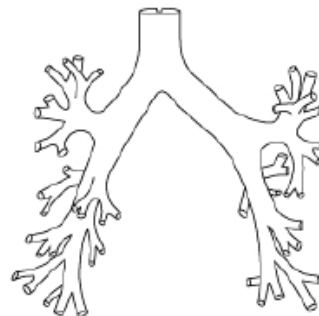

A lesion was found in the left mainstem bronchus. Biopsied.

**Recommendation:**

- The patient was observed post-procedure, until all discharge criteria were met.
- Await test results.
- Follow up with bronchoscopist in 2 weeks.

Left mainstem bronchus: Non-obstructing lesion

Tracheobronchial Tree
