

# Provation® Apex Cybersecurity

Reassuring your organization and changing  
the way you think about cloud security

Provation takes security and data privacy responsibilities seriously. When our customers use Provation solutions, they know that a committed team is standing behind them, ensuring that data is properly stored and protected.

Cloud-based Provation® Apex takes data protection steps even further and implements best-in-class security and hosting practices exceeding industry standards.

The vision for Provation Apex's security is simple: Provide peace-of-mind to your organization. With Provation Apex, you'll find:

Multiple protection layers of cloud security

Reduced IT and security burden

Continuous, automatic software and security updates

Increased operational scalability with easy go-lives

Maximized business continuity with no burden for backups

The future is moving to the cloud, but hospitals and ASCs are still weary of lost or misplaced PHI data or a catastrophic data breach.

Provation Apex goes above and beyond mandatory practices like HIPAA by employing internal and external teams to manage data protection, receiving extensive security certifications (SOC2 and ISO27001) and changing the way customers feel about hosting data.

# The Provation Apex Difference

Now, more than ever, is the time to choose a solution that puts your organization's and your patients' data protection first. Layers of controls and dedicated individuals are what sets Provation Apex apart.

## WHO?

### Provation Apex's Internal and External Defense Team

Unlike on-premise software that requires you to employ full-time IT and security personnel, Provation Apex is:

- ✓ Governed 24/7/365 by the Provation Security Operations Center
- ✓ Backed by third-party security to help defend against lost or breached data
- ✓ Supported by the Provation Cloud Team, who applies all server updates and responds to alerts

## HOW?

### Provation Apex's Unrivaled Security Compliance and Features

Taking an independent view on the security of Provation Apex, Provation developed multiple layers to safeguard the transmission and storage of your protected data.

- ✓ Implement CIA Security Framework, ensuring data is available, but not exposed or altered
- ✓ Utilize transport security by taking measures to protect data in flight
- ✓ Protect transactional data with unique segmentation to ensure quality and accurate information

## WHAT?

### Provation Apex's Goal to Protect Customers with Additional Controls

Operating under Microsoft Azure Cloud, Provation Apex maintains industry standard "uptime," so that our customers' data is monitored and protected. Azure georeplicates data in another part the country, so that data is never lost and is always available.
