

# Accelerate Revenue with Provation® iPro

*From Procedure to Payment—Faster, Smarter, Cleaner*

In today's healthcare landscape, facilities are under pressure from all sides:

- Delayed payments are straining cash flow and financial stability
- Rising anesthesia costs are squeezing margins
- Documentation burdens are pulling providers away from patient care

Provation® iPro is purpose-built to address these challenges—transforming anesthesia documentation into a strategic asset that drives revenue, efficiency, and provider satisfaction.

## The Challenge

- **40+ days** from surgery to payment due to manual workflows, physical document transfers, & billing delays
- **Missed charges** from out-of-OR procedures and services
- **Undercoding** from incomplete or inconsistent documentation
- **Provider frustration** with time-consuming, paper-based records that detract from patient care

## The Provation iPro Impact

### 7x FASTER REVENUE CYCLE

Before implementing Provation iPro, a customer reported that billing documents took over 40 days to reach the billing company due to manual handoffs, physical transfers, and back-and-forth clarification. With Provation iPro:

- Billing documents are **digitally transmitted immediately** upon case sign-off
- All charges are captured with **hard stops** and embedded CPT and ASA codes.
- Documents are **complete, legible, and compliant**, eliminating delays
- Result: Revenue cycle **reduced to just 6–7 days**—a 7x improvement

### 1st -TIME FILING SUCCESS

Provation iPro eliminates the need for billing companies to chase down missing or illegible data:

- No more back-and-forth with providers or hospitals
- Complete, accurate documentation supports **clean claims on first submission**
- Faster reimbursement, fewer denials, and reduced administrative overhead

### 20% HIGHER CHARGE CAPTURE

Across multiple customers, Provation iPro has driven a **~20% increase in charge capture** by:

- Ensuring all billable services are captured at the point of care
- Enforcing **hard stops** to prevent missed charges
- Embedding accurate **CPT and ASA codes** directly into the workflow
- Digitizing records to eliminate transcription errors and omissions

## How Provation iPro Makes It Happen

### Mobile-First AIMS

Designed for anesthesia providers, optimized for OR and NORA workflows

### Real-time Integration

Seamlessly integrates with EHRs and billing systems

### Streamlined Documentation

Intuitive interface reduces documentation time, allowing providers to see more patients while maintaining comprehensive records

### Automated Compliance

Built-in logic ensures documentation meets payer and regulatory standards
